

DCG Quickcountsm

“High Velocity Sizing...”

“Good enough information is better than no information at all – unknown”

Considering outsourcing all or part of your application portfolio?

Looking for more measured value from your outsourcing vendors?

Does your management want greater insights into your application maintenance costs and efforts?

Software managers and leaders require all kinds of information to manage their applications and their portfolios. Inventory type information is useful as well as categorical information.

Function point based cost and performance information gives you critical data that is objective, industry relative, statistically defensible and helps you manage internal staff and vendor activity towards corporate goals.

However addressing medium to large applications and portfolios can be a challenge. If you have a large portfolio of projects or applications to be counted but you are significantly budget-, or time-, constrained, traditional FP counting approaches may not help you.

But if you have suitable available internal staff (one-time or on a recurring basis) to participate, the DCG Quickcountsm process might be right for you...

Contact Fiona Thompson at 610-644-2856 x 21 to schedule your Quickcountsm Evaluation
